Bed Bug Treatment Preparations:

1. Launder bedding and clothing from infested rooms and dry at high temperature. Place in clean garbage bags, seal and store away from treated areas
2. Pick up items from the floor: toys, clothes etc... Remove all items from on top of and inside all dressers, night stands, coffee tables and end tables. Move furniture away from the wall
3. Do not transfer any items from infested rooms into another room. This prevents the bugs from spreading to other areas in the home
4. Thoroughly vacuum floors and baseboards and dispose of its contents outside
5. Turn off and unplug all electrical appliances
6. Please leave the mattress and box spring as undisturbed as possible before our first treatment
7. If the technician will need to handle a king size mattress, we request someone be available to help with the lifting
8. Sever infestations may warrant removal of carpet, baseboards, switch plates and outlet covers for a more thorough treatment
9. People and Pets need to be out of the house for treatment for 2-4 hours

Post Treatment Procedures:

1. Service includes three treatments, inspections and monitoring
2. If possible we recommend the infested room not be occupied during our three step treatment process
3. The use of an air mattress is recommended until our technicians give the okay to bring in a new mattress to prevent further spread. Sleep in a room that was not infested if possible
4. We highly recommend monthly service for at least 1 – 6 months to help prevent any reinfestations
5. Bed Bug covers should be applied to any new mattress and box spring that is brought back into the room after treatments are complete
